COMPLETE CONTROL
OVER YOUR GDPR COMPLIANCE

GDPR: A NEW LIFESTYLE

The new GDPR legislation has been in force in all European countries since 25 May 2018. This legislation regulates the processing of personal data and, in doing so, safeguards personal privacy. Instead of considering this new data legislation as a 'to-do', consider it as a new lifestyle for your business. OMNIPRIVACY helps you to achieve complete control over the GDPR processes in your company. This makes your company, association, or institution 100% privacy-friendly.

OMNIPRIVACY: 360° SUPPORT

In addition to being the right-hand of the Directors, the Data Protection Officer (DPO) is also the point of contact between the company and the national data protection authority. The DPO must implement a company culture which guarantees that data are protected correctly. Furthermore, the DPO provides strategic advice at management level as well as implementing audits, process improvements, training, and information-sharing initiatives at employee level.

OMNIPRIVACY is a user-friendly, cloud-based application that helps the DPO to maintain a complete overview of the procedures, processes, risks, and transparent data processing of the GDPR-compliant company.

The CxO is responsible for the daily management and the strategic vision of the company and has final responsibility for everything that happens in the company, including non-compliance with the data legislation. So, having insight into which personal data the company processes, where the data is stored, who has access to the data, and what the risks are is no unnecessary luxury.

OMNIPRIVACY helps the DPO to report to the CxO on all aspects of company compliance in a simple and transparent manner at any time.

OMNIPRIVACY is a user-friendly, cloud-based management application which provides 360° control over the GDPR compliancy of your company. Besides maintaining centralised control, you can also easily provide extensive reporting to all relevant parties.

OMNIPRIVACY: COMPLETE CONTROL IN 7 STEPS

1 PROCESSING REGISTER:
Manage and document all processing activities related to personal data

2 DATA LEAKS:
Manage data leaks and create a direct exchange with the necessary relevant parties, such as the Data Processor, Data Controller, Legal Department, Data Protection Officer, etc.

3 PRIVACY REQUESTS:
Manage all types of privacy requests from one central point (right to be forgotten, right of access, etc.)

4 AGREEMENT MANAGEMENT:
Easily gain insight into previously made agreements or agreements yet to be made which relate to data processors or data controllers.

5 DOCUMENT MANAGEMENT:
Manage all GDPR-related documents, such as privacy statements, procedures, processor agreements, GDPR guidelines, etc. Manage the validity of each of these documents and use the standard document templates to quickly draft your own statements, etc.

6 RISK MANAGEMENT:
Manage identified risks and define procedures and measures.

7 DASHBOARDS:
Well-organised and role-specific dashboards display risks and tasks.

OMNI**PRIVACY**

Graphic representation of 7 processes which are continuously monitored to ensure 100% control and oversight of the company's GDPR compliancy.

TWO POWERFUL VERSIONS

Because the needs and GDPR obligations for every company are different, OMNIPRIVACY is available in two different versions. The "Essential" version is for monitoring basic processes. The "Extended" version was developed for companies which require complete control and monitoring of their GDPR compliancy.
